Re: Data Center Technician - Microsoft

Dear Hiring Team

I am applying for the Data Center Technician position in Melbourne. My background combines hands-on telecommunications infrastructure work with enterprise hardware provisioning, endpoint lifecycle management and high-scale systems operations.

As a Telecommunications Field Technician with National Broadband Network, I executed Layer 1 deployments, ran physical cabling through residential and commercial environments, fault-found physical network lines, and installed and maintained infrastructure equipment. More recently, at Australia Post, I have delivered hardware diagnostics and repair, OS reimaging, device provisioning, Autopilot/UEM enrolment, inventory control and compliant equipment disposal. I also escalate complex infrastructure faults and work with L3 teams to drive incidents to resolution.

I bring disciplined operational habits from managing a 660,000+ user Department of Education environment: controlled changes, security patching, ITSM records, RCA and as-built documentation. That experience achieved 99.9% uptime and strengthened my ability to work methodically in environments where safety, accuracy and service continuity matter. My Azure Administrator certification and ITIL 4 Foundation further support this operational foundation.

I would welcome the opportunity to contribute practical field experience, careful equipment handling and a continuous-improvement mindset to Microsoft's data centre operations team.

Yours sincerely

Sam Ludwig
