Re: Computer Network and Systems Engineer

Dear Hiring Manager

Converged Medical Solutions' focus on cybersecurity and Microsoft 365 for healthcare, government and commercial organisations is a strong match for my background. I bring enterprise M365 and Azure depth, hands-on endpoint and network experience, and the support discipline required when customers depend on reliable systems.

At Capgemini, I supported the Department of Education Victoria as a Tier-3 escalation point across SharePoint, Exchange, Teams, OneDrive, Entra ID and hybrid identity. The environment supported more than 660,000 active users across 1,000+ site collections, with 99.9% uptime in a government SLA setting. I handled complex incidents, critical changes, patching, governance and capacity work, and built PowerShell, PnP PowerShell and Graph automation for provisioning and compliance auditing.

My healthcare experience is directly relevant. At St John of God Health Care, I led a Windows 11 migration across more than 100 clinical endpoints using Autopilot and Intune, validating clinical applications and providing hypercare without disrupting patient-facing operations. At Australia Post, I delivered hardware diagnostics, imaging, provisioning, endpoint lifecycle control and ServiceNow-based support in a high-volume enterprise environment. Earlier, as an NBN field technician, I gained practical Layer 1 fibre and copper installation and fault-finding experience.

I can contribute across the full support lifecycle: diagnose the immediate fault, understand the underlying cause, communicate clearly with the customer, document the fix, and automate the recurring work where it makes sense. That approach fits a managed-services environment where technical quality and customer trust matter equally.

Yours sincerely

Sam Ludwig
