Re: Data Center IT Support Engineer, Data Centre Operations - Amazon.com

Dear Hiring Manager

I am applying for the Data Center IT Support Engineer, Data Centre Operations position with Amazon.com. This data-centre operations role is an adjacent but credible match. I bring hands-on hardware and endpoint support, physical infrastructure, structured cabling, systematic fault-finding, and reliable operational discipline. The server and networking depth needs confirmation.

At Australia Post via Capgemini, I delivered endpoint and infrastructure support, managed hardware and software lifecycle work, resolved complex faults, and built ServiceNow automation that reduced repetitive manual effort. At St John of God Health Care, I delivered a Windows 11 migration across more than 100 clinical endpoints using Autopilot, Intune, application validation, and post-deployment support.

Earlier work with Capgemini for the Department of Education Victoria involved Microsoft 365, Entra ID, hybrid identity, Azure, security-aware change, Tier 3 escalation, PowerShell automation, and documented operational improvement at significant scale. My field background adds practical fault-finding, equipment handling, site assessment, and reliable work ownership.

The areas most relevant to this role are data centre operations, server support, networking, hardware diagnostics. I would bring dependable task ownership, clear communication, and a willingness to learn the way your team works.

I am happy to confirm any licence, qualification, clearance, roster, travel, or role-specific requirement before progressing.

Thank you for considering my application. I would welcome a conversation about how my background could contribute to your team.

Yours sincerely

Sam Ludwig
