Re: Senior Site Reliability Engineer (Digital Infrastructure) - Certus Digital

Dear Hiring Manager

I am applying for the Senior Site Reliability Engineer (Digital Infrastructure) position with Certus Digital. Fresh individual Indeed listing posted August 13 for a Melbourne SRE role in digital infrastructure. Credible stretch match through cloud operations, incident management, automation, and enterprise infrastructure support.

At Australia Post via Capgemini, I delivered endpoint and infrastructure support, managed hardware and software lifecycle work, resolved complex faults, and built ServiceNow automation that reduced repetitive manual effort. At St John of God Health Care, I delivered a Windows 11 migration across more than 100 clinical endpoints using Autopilot, Intune, application validation, and post-deployment support.

Earlier work with Capgemini for the Department of Education Victoria involved Microsoft 365, Entra ID, hybrid identity, Azure, security-aware change, Tier 3 escalation, PowerShell automation, and documented operational improvement at significant scale. I bring clear communication, structured troubleshooting, and reliable task ownership.

The areas most relevant to this role are site reliability, digital infrastructure, cloud operations, incident management, automation. I would bring practical enterprise support experience, disciplined documentation, and a willingness to learn the specific platform and operating model used by your team.

I am happy to confirm any licence, qualification, clearance, roster, travel, or role-specific requirement before progressing.

Thank you for considering my application. I would welcome a conversation about how my background could contribute to your team.

Yours sincerely

Sam Ludwig
