Re: Senior Systems/Commissioning Engineer - Kapsch TrafficCom Australia

Dear Hiring Manager

I am applying for the Senior Systems/Commissioning Engineer position with Kapsch TrafficCom Australia. Fresh individual Indeed listing posted August 14. The Melbourne systems and commissioning focus is adjacent to enterprise infrastructure delivery and warrants review, but the transport-systems domain and engineering requirements need confirmation.

At Australia Post via Capgemini, I delivered endpoint and infrastructure support, managed hardware and software lifecycle work, resolved complex faults, and built ServiceNow automation that reduced repetitive manual effort. At St John of God Health Care, I delivered a Windows 11 migration across more than 100 clinical endpoints using Autopilot, Intune, application validation, and post-deployment support.

Earlier work with Capgemini for the Department of Education Victoria involved Microsoft 365, Entra ID, hybrid identity, Azure, security-aware change, Tier 3 escalation, PowerShell automation, and documented operational improvement at significant scale. I bring clear communication, structured troubleshooting, and reliable task ownership.

The areas most relevant to this role are systems engineering, commissioning, intelligent transport systems, technical delivery. I would bring practical enterprise support experience, disciplined documentation, and a willingness to learn the specific platform and operating model used by your team.

I am happy to confirm any licence, qualification, clearance, roster, travel, or role-specific requirement before progressing.

Thank you for considering my application. I would welcome a conversation about how my background could contribute to your team.

Yours sincerely

Sam Ludwig
