Re: IT Administrator (Modern Workplace & Hybrid Systems)

Dear Hiring Manager,

You're looking for someone who can walk into a hybrid AD/M365 environment, manage the day-to-day operations across endpoints, identity, and SaaS platforms, and drive the digital transformation from legacy on-premises to modern cloud. I've been doing exactly that for the last 4+ years at enterprise scale — including managing the largest SharePoint deployment in the Southern Hemisphere.

What I Bring

At Capgemini, I managed a 660,000-user hybrid M365 environment as the Tier-3 escalation point for complex identity, SharePoint, and endpoint issues. I handled the full stack: Active Directory sync with Entra ID, PowerShell automation for bulk provisioning and tenant configuration, Intune compliance policies and Autopilot deployments, and ServiceNow integration for ticket routing. When I built a PnP PowerShell MFA compliance framework across 200+ SharePoint sites, I didn't just write code — I documented it, handed it to the security team, and made sure it was maintainable.

At Australia Post, I was hands-on with endpoint lifecycle management — OS re-imaging, Autopilot enrolment, device provisioning, and automation development. I've deployed self-help kiosks, built keystroke injection automations for ServiceNow, and managed Windows 11 migrations across clinical environments where uptime isn't optional.

Why This Role

Your job description mentions "hybrid legacy systems" that need untangling, a FortiGate VPN supporting remote teams, a SaaS stack that includes HubSpot and Aircall, and an Intune/Autopilot environment that needs someone to own it. That's the kind of environment where my breadth of experience — from identity sync through to endpoint deployment and SaaS administration — becomes a genuine asset rather than a fragmented skillset.

I'm not looking for a ticket queue. I'm looking for a role where I take ownership of the full internal IT environment, build the systems and documentation that make it run smoothly, and drive the modernisation work that'll define this company's infrastructure for years.

I'd love to discuss how I'd approach your planned Entra ID migration, what my Intune Autopilot deployment workflow looks like, and how I'd get up to speed on HubSpot and Aircall within my first month.

Available immediately and ready to hit the ground running.

Regards,

Sam Ludwig
