Re: Infrastructure Delivery — Network Technician, InfraOps

Dear Hiring Team,

I am applying for the Infrastructure Delivery — Network Technician role in Melbourne. I offer direct Layer 1 telecommunications deployment experience, current enterprise hardware and endpoint operations experience, and a strong record of accurate, ticket-driven infrastructure work.

At National Broadband Network, I ran physical cabling through complex residential and commercial environments, performed hands-on fault-finding across physical network lines, and installed and maintained infrastructure equipment. At Australia Post, I now manage hardware diagnostics, imaging, Autopilot/UEM enrolment, equipment lifecycle, inventory and compliant disposal in a high-volume service centre. These roles have developed the methodical execution, asset awareness and escalation discipline needed for reliable network delivery.

I also bring broader systems depth: as a Senior Engineer supporting the Department of Education Victoria, I managed changes and patching for a 660,000+ user environment, maintained 99.9% uptime, produced RCA/as-built documentation and handled 40+ concurrent tickets with more than 90% resolved within SLA. I use PowerShell and Python to remove repetitive work while preserving operational controls.

AWS's focus on scalable, standardised infrastructure is a strong fit for my practical delivery background and automation-first mindset. I would value the opportunity to help build and maintain dependable network infrastructure.

Yours sincerely,

Sam Ludwig
