Re: Information Systems Analyst

Dear Hiring Team,

I am applying for the Information Systems Analyst position with the City of Greater Dandenong. I offer experience analysing enterprise application and infrastructure issues, translating technical findings for stakeholders, improving operational processes and supporting secure government environments.

As a Senior Engineer supporting the Department of Education Victoria, I managed systems used by 660,000+ active users across 1,000+ SharePoint sites. I investigated identity and authentication failures across Active Directory, Entra ID and Google Workspace, resolved Exchange mail-flow and federation issues, led RCA that reduced repeat incidents by 15%, and produced as-built documentation and knowledge-base material. I also automated MFA compliance auditing across 200+ sensitive SharePoint sites with PnP PowerShell and reporting.

At Knosys, I delivered L3 application support, diagnosing database query failures, API integration errors and front-end defects while collaborating with developers on code-level fixes. I used Python and PowerShell to reduce migration processing time from two hours to 15 minutes and improve patch consistency. My SharePoint consulting background includes work for Victoria Police and Transurban, governance, migrations and Azure DevOps delivery.

I would welcome the opportunity to apply this combination of analysis, service improvement, security awareness and stakeholder communication to council information systems.

Yours sincerely,

Sam Ludwig
