

Dear Coles hiring team,

I'm applying for the Cloud Engineer role in Hawthorn East. I bring hands-on experience across Azure, Microsoft 365, hybrid identity, endpoint management, PowerShell automation, and enterprise service operations.

In my recent role supporting the Department of Education Victoria, I worked across services used by more than 660,000 people. I supported Azure cloud adoption and legacy application remediation, administered Entra ID and hybrid Active Directory synchronisation, resolved complex Microsoft 365 incidents, and built automation for MFA compliance and ServiceNow workload distribution. Structured root-cause analysis and documentation helped reduce repeat incidents by 15%.

I've also implemented Azure DevOps CI/CD pipelines, delivered enterprise SharePoint migrations, and built PowerShell and Python tooling that reduced migration processing time from two hours to 15 minutes. This combination lets me work across both cloud engineering and the operational detail needed to keep platforms secure, supportable, and reliable.

Coles' Hawthorn East location is a strong practical fit, and the scale of the organisation makes the engineering problems meaningful. I'd welcome the opportunity to contribute to a cloud platform team focused on dependable delivery and continuous improvement.

Kind regards,

Sam Ludwig
