Re: Technician/Engineer — Integration and Install

Dear Hiring Team,

I am applying for the Technician/Engineer Integration and Install role in Malvern. My experience combines hands-on installation and deployment, hardware and software troubleshooting, physical infrastructure work and careful post-install validation.

At St John of God Health Care, I led the deployment of Windows 11 across 100+ clinical endpoints, completing hardware preparation, Autopilot enrolment, Intune policy application and validation of EMR, diagnostic imaging and clinical administration software. I worked directly with clinical users and engineering teams, then provided hypercare in a live environment where continuity mattered.

At Australia Post, I provide hardware diagnostics and repair, OS reimaging, provisioning, endpoint enrolment, inventory and compliant disposal, while escalating complex infrastructure faults to L3 teams. My earlier NBN field role gave me practical experience installing and maintaining equipment, running physical cabling and fault-finding Layer 1 services.

I also bring an automation and documentation mindset: I use PowerShell/Python, ServiceNow, RCA and as-built documentation to make delivery repeatable and supportable. I would be excited to apply this combination of field execution, integration discipline and stakeholder communication at FMS.

Yours sincerely,

Sam Ludwig
