

Dear Lab3 hiring team,

I'm applying for the Engineer – Modern Workplace role in Melbourne. My experience combines Microsoft 365 administration, endpoint engineering, identity, and automation across large enterprise environments.

At the Department of Education Victoria, I supported a SharePoint environment serving more than 660,000 users and acted as a Tier-3 escalation point across Microsoft 365 and Google Workspace. I built PnP PowerShell automation for MFA compliance across 200+ SharePoint sites, resolved hybrid identity and authentication issues across Active Directory, Entra ID, and Google Workspace, and improved recurring-incident outcomes by 15% through root-cause analysis and documentation.

I've also delivered Windows 11 migrations across live clinical environments, including Autopilot enrolment, Intune policy application, validation, and hypercare. My approach is practical and automation-first: reduce manual effort, make operational behaviour measurable, and leave the environment better documented than it was found.

Lab3's focus on Azure engineering, Modern Workplace, and managed services aligns closely with the work I want to do next. I'd welcome the opportunity to contribute hands-on technical depth while helping customers build reliable, secure, and maintainable Microsoft environments.

Kind regards,

Sam Ludwig
