Re: Systems Administrator

Dear Hiring Team,

I am applying for the Systems Administrator role with State Library Victoria. My background covers Windows and identity administration, Microsoft 365, endpoint management, cloud operations, patching, incident response and automation across large, service-critical environments.

In my Senior Engineer role supporting the Department of Education Victoria, I manage a 660,000+ user SharePoint environment across 1,000+ sites, execute critical changes and security patching, and maintain 99.9% uptime. I administer Exchange Hybrid and Teams, troubleshoot synchronisation across Active Directory, Entra ID and Google Workspace, and support Azure cloud adoption aligned to ACSC Essential 8 and security baselines. As the Tier-3 escalation point, I lead RCA and create as-built documentation, runbooks and knowledge-base content.

My recent endpoint roles add practical Windows administration: I have deployed and supported Windows 10/11, Autopilot, Intune/UEM, OS imaging, application compatibility validation and compliant device disposal. I also use PowerShell and Python to automate migration and patching work, and hold Microsoft Azure Administrator Associate and ITIL 4 Foundation certifications.

I would welcome the opportunity to contribute reliable administration, thoughtful change management and continuous improvement to the Library's technology environment and public-service mission.

Yours sincerely,

Sam Ludwig
