Re: Technical Consultant - Platforms

Dear Hiring Manager

Cube Networks' Microsoft Cloud and Infrastructure consulting focus matches the intersection of my experience: hands-on Azure and M365 engineering, technical advisory work, enterprise migrations, governance and the ability to explain complex solutions clearly to customers.

As a Senior Managed Services Engineer at Capgemini, I consulted to the Department of Education Victoria across a 660,000+ user M365 environment. I acted as a Tier-3 technical authority for SharePoint, Exchange, Teams, OneDrive, Entra ID and hybrid identity, while managing changes, patching, governance and capacity across more than 1,000 site collections. I also led Azure cloud initiatives aligned with Essential 8 requirements and built PowerShell, PnP PowerShell and Microsoft Graph automation for provisioning, configuration and compliance auditing.

My delivery experience covers the full lifecycle. At St John of God Health Care, I led Windows 11 migration across more than 100 clinical endpoints using Autopilot and Intune, with compatibility validation and hypercare. At Australia Post, I supported endpoint provisioning, imaging, lifecycle management, inventory, ServiceNow workflows and L2/L3 escalation. Earlier, at Engage Squared, I delivered SharePoint solutions, SPFx components, Azure DevOps pipelines and customer workshops for enterprise clients.

I would bring Cube Networks a consultant who can move between architecture, implementation and operational reality. I'm comfortable gathering requirements, facilitating a technical workshop, building the solution, documenting it, and remaining accountable when the environment enters production. That combination is particularly valuable when customers need modernisation that is both technically sound and practical to operate.

Yours sincerely

Sam Ludwig
