Re: Senior Endpoint Engineering Specialist

Dear Hiring Manager

Datacom's endpoint engineering practice is a strong match for my background in designing, deploying and supporting Windows environments at enterprise scale. I bring hands-on Intune and Autopilot delivery, hybrid identity expertise, endpoint lifecycle management, PowerShell automation and the operational discipline needed to support customers through change.

At St John of God Health Care, I led a Windows 11 migration across more than 100 clinical endpoints. I managed hardware preparation, Autopilot enrolment, Intune policy application, compliance verification, SOE adherence, clinical application compatibility testing, user handoff and hypercare. The environment required careful change planning and clear communication because endpoint reliability directly affected clinical operations.

At Australia Post, I managed the practical endpoint lifecycle from diagnostics, imaging and provisioning through Autopilot/UEM enrolment, inventory control, loan-device management and compliant disposal. I also built automation for recurring ServiceNow ticket work and acted as an escalation point for complex faults. This experience complements my broader M365 and identity work at Capgemini, where I supported a 660,000+ user environment and used PowerShell, PnP PowerShell and Microsoft Graph to automate provisioning, compliance auditing and configuration.

The value I would bring to Datacom is the combination of engineering depth and operational follow-through. I can design repeatable endpoint processes, troubleshoot difficult device and identity issues, document the result, and communicate clearly with customers and delivery teams. I'm ready to contribute to a modern endpoint practice that values reliable outcomes over temporary fixes.

Yours sincerely

Sam Ludwig
