## Re: Platform Engineer - Cognizant

Dear Hiring Manager

I am applying for the Platform Engineer position with Cognizant. Fresh individual Melbourne platform-engineering listing with a credible match across cloud operations, automation, enterprise support, and consulting delivery.

My recent work at Australia Post via Capgemini covered endpoint support, Windows imaging, provisioning, Autopilot/UEM enrolment, hardware lifecycle, inventory, user access, and ServiceNow automation. At St John of God Health Care, I led a Windows 11 migration across more than 100 clinical endpoints using Autopilot, Intune, application validation, and post-deployment support.

Earlier work with Capgemini for the Department of Education Victoria involved Microsoft 365, Azure, Entra ID, hybrid identity, security-aware change, Tier 3 escalation, PowerShell automation, RCA, and operational documentation at significant scale.

The areas most relevant to this role are platform engineering, cloud operations, automation, enterprise support, technical consulting. I would bring dependable task ownership, clear communication, practical troubleshooting, and a willingness to learn the way your team works.

I am happy to confirm any licence, qualification, clearance, roster, travel, or role-specific requirement before progressing.

Thank you for considering my application. I would welcome a conversation about how my background could contribute to your team.

Yours sincerely

Sam Ludwig
