Re: Information Technology Service Desk Analyst

Dear Hiring Team

I am applying for the Information Technology Service Desk Analyst role with STACK Infrastructure. I bring current L1/L2 service-centre experience, strong ITIL and ServiceNow practice, and the systems depth to resolve issues rather than simply route them.

At Australia Post, I deliver face-to-endpoint and remote support covering hardware repair, OS reimaging, loan devices, new employee provisioning and accessories. I manage endpoint lifecycle through imaging, Autopilot/UEM enrolment and compliant disposal, maintain inventory, and escalate complex infrastructure faults to L3 teams. I also supported a self-help kiosk programme and engineered automation for repetitive ServiceNow ticket workflows.

As a Senior Engineer supporting the Department of Education Victoria, I served as a Tier-3 escalation point across M365 and Google Workspace, led RCA that reduced repeat incidents by 15%, managed 40+ concurrent tickets with more than 90% resolved within SLA, and created documentation that improved future resolution and onboarding. My Knosys application-support experience adds L3 troubleshooting across databases, APIs and enterprise platforms.

I would welcome the opportunity to bring responsive customer support, accurate ITSM practice and durable problem-solving to STACK's infrastructure operations.

Yours sincerely

Sam Ludwig
