Re: Level 2 Service Desk Engineer - Melbourne

Dear Hiring Manager

The efex role appeals because it combines hands-on technical support with ownership of client outcomes. My background covers L2/L3 support across Microsoft 365, Azure, Entra ID, Intune, Autopilot, Windows, ServiceNow and enterprise endpoint operations, with the ITIL discipline needed to manage incidents well and improve the service behind them.

At Australia Post, I delivered face-to-endpoint and remote support for hardware diagnostics, Windows imaging, provisioning, Autopilot/UEM enrolment, inventory, loan devices and compliant disposal. I also built ServiceNow automation for repetitive ticket work and escalated complex infrastructure faults to L3 engineering teams. This was a high-volume environment where accurate triage, clear communication and SLA ownership mattered every day.

At Capgemini, I operated as a Tier-3 escalation point for the Department of Education Victoria across M365, SharePoint, Exchange, Teams, OneDrive, Entra ID and hybrid identity. I supported a 660,000+ user environment, managed 40+ concurrent tickets with more than 90% resolved within SLA, and produced RCA reports and knowledge articles that improved repeatability. My healthcare endpoint-migration work also strengthened my ability to support users through change without losing focus on business-critical operations.

I would bring efex a technically capable service desk engineer who can resolve the immediate issue, explain the answer to the customer, and leave the environment better documented than it was before. I'm available immediately and ready to contribute to your Melbourne team.

Yours sincerely

Sam Ludwig
