Re: Senior System Engineer - L3

Dear Hiring Manager

The opportunity to join a cloud-first managed service provider as a Level 3 engineer is a direct match for my background. I bring senior escalation ownership, Azure and Microsoft 365 depth, migration experience, and the ability to become a trusted technical advisor rather than simply work a queue.

At Capgemini, I supported the Department of Education Victoria as the Tier-3 escalation point across SharePoint, Exchange, Teams, OneDrive, Entra ID and hybrid identity. The environment supported more than 660,000 active users across 1,000+ site collections, with 99.9% uptime in a government SLA environment. I handled complex incidents and changes, patching, capacity and governance, and supported Azure cloud adoption and security baseline work aligned with Essential 8 requirements.

I also bring recent hands-on endpoint and migration experience. At St John of God Health Care, I led a Windows 11 migration across more than 100 clinical endpoints using Autopilot and Intune, validating clinical applications and providing hypercare. At Australia Post, I delivered hardware diagnostics, imaging, Autopilot/UEM enrolment, lifecycle management, ServiceNow automation and L3 escalation in a high-volume enterprise environment.

My operating style is straightforward: take ownership of the technical outcome, understand the root cause, communicate the trade-offs, document the fix, and automate recurring work where it improves reliability. That approach has helped me maintain stable enterprise services while giving customers clear, practical advice about modernisation.

Yours sincerely

Sam Ludwig
