Re: End User Computing Support Engineer - Australian Government Bureau of Meteorology

Dear Hiring Manager

I am applying for the End User Computing Support Engineer position with Australian Government Bureau of Meteorology. Fresh individual Indeed listing posted August 13 for APS Level 5 ongoing EUC support, with Melbourne and nationwide office coverage and remote work available. Strong match for Windows endpoint, Intune, Autopilot, service desk, and government operating discipline.

At Australia Post via Capgemini, I delivered endpoint and infrastructure support, managed hardware and software lifecycle work, resolved complex faults, and built ServiceNow automation that reduced repetitive manual effort. At St John of God Health Care, I delivered a Windows 11 migration across more than 100 clinical endpoints using Autopilot, Intune, application validation, and post-deployment support.

Earlier work with Capgemini for the Department of Education Victoria involved Microsoft 365, Entra ID, hybrid identity, Azure, security-aware change, Tier 3 escalation, PowerShell automation, and documented operational improvement at significant scale. I bring clear communication, structured troubleshooting, and reliable task ownership.

The areas most relevant to this role are EUC support, level 1 and level 2 ict support, windows, endpoint management, government operations. I would bring practical enterprise support experience, disciplined documentation, and a willingness to learn the specific platform and operating model used by your team.

I am happy to confirm any licence, qualification, clearance, roster, travel, or role-specific requirement before progressing.

Thank you for considering my application. I would welcome a conversation about how my background could contribute to your team.

Yours sincerely

Sam Ludwig
